Software Development Engineer
Lineal Software Solutions Ltd
July 2017
Salary £25-30k+

Lineal is excited to announce this unique opportunity to join our growing team of software developers;

Do you have energy, drive and ambition?
Do you want to have a career where you are pushed to explore?
Do you want to learn about programming business systems?

Based in North Devon, we have an exceptional opportunity for the right candidate to work in a progressive and thriving company with excellent potential for future growth.

The successful applicant will work with Lineal on the development of our flagship "SQLWorks" software, a business software suite including accounts, stock, CRM and more. You will be involved in work across all areas of the development process. With a desire to learn and engage, you will benefit from a broad range of business experience. Lineal will increasingly look to you to respond proactively, working with considerable autonomy while managing the progress of your own development projects.

The multifaceted development process employed at Lineal leads to a requirement of a wide range of programming skills and general IT competency. Working directly with clients, the successful applicant will cover the entire range of software design, from the conceptual / design level through to SQL optimisation and GUI creation. As Lineal develops its reach into web delivery, experience with current web and network technologies would also be an advantage.

The successful candidate will be expected to enter into a training program that will include training sessions and attendance at international conferences. In time, the candidate will be able to shape and determine the nature of their own training programme within the company. The right candidate will be encouraged to work with and regularly visit existing clients nationally, for this reason a full and valid drivers licence is desirable.

 Applicants should have the following competencies:

- Proven qualification in Software Engineering or a related discipline – candidates without BSc will be considered but must have strong A-Level or equivalent, or a Foundation degree.
- Relevant industry experience, including work placements, would be highly advantageous - either from client or development side.

- Excellent programming skills, including knowledge and experience of a recognised OO programing language.
- A logical and innovative approach to problem solving.
- An inquisitive, self-motivated and dynamic attitude, with the desire and ability to develop a deep understanding of our company and its customers.
- Excellent administration skills, and the ability to work effectively as part of a team and with all levels of staff.
- The skills to prioritise and work to deadlines under pressure.
- A flexible and enthusiastic mindset.
